

WHAT IS IT

Buildingprojection, the name already says it, it's a projection on a building. This projection is a three-dimensional animation aligned to the shape and windows of the building. This creates a unique experience. Think of items that move around pillars or objects flying out of windows, the possibilities are endless.

HOW IT WORKS

To align the projection seamlessly onto the building we will first analyze the building and take pictures of it. Then the animation will be created entirely onto the architecture of the building and according to the pre-existing terms. After the animation has been realized, we'll install our buildingprojection system on site and use custom software to align the animation to the building. This way the projection will have a perfect overlay on the building.

IN BRIEF

- Makes your building stand out
- Gives your message a unique look
- Custom design
- Low maintenance
- Not only for sale, but also for rent
- Flexible in content, size and effects
- Can be placed at almost any location
- Stable software and beamers

THE POSSIBILITIES

Buildingprojection can be applied on almost every location: along highways, at events or in the middle of a center. Wherever it's placed, one thing is certain, passersby can't avoid it. Building-projection is a completely innovative and impressive way of communication. Your message will attract attention without a doubt and people will remember it.
