

## WHAT IS IT

Vision2Watch offers a spectacular new way of presenting your brand, product or service with the Holographic projection.

Whether it's on the shop floor, conferences or in the lobby of your building. Wherever it's placed, people will stop and watch. A spectacular sight for every passersby and an extraordinary way for your company to stand out. This gives your message the attention it deserves.

## HOW IT WORKS

With special projection techniques people, products or other objects seem to float in space. This creates the illusion of a real hologram. The holographic projection is a spectacular experience and therefore an effective way to attract attention.

## IN BRIEF

- A unique way of communication
- Attracts attention
- Simple and quick to install at almost any location
- Flexible in content and size
- Also available in touch screen
- Holographic screen available in sizes from 35 inch to 134 inch, larger on request
- Stable software, projection screens and beamers
- Low maintenance
- Not only for sale, but also for rent
- We'll provide standard- or custom-made software

## THE POSSIBILITIES

Because the holographic projection system uses very little space pretty much every construction is possible. Shop windows, lobbies and fairs can be fitted with our system. It can even be applied on existing glass. The content can be pretty much everything you can think of. Customers can interact with the hologram of your product, let your salesmen float or butterflies fly through your room. The holographic projection is also available as touch screen, so that the image on the screen reacts or alters when touched.
