

# VISION2WATCH HOT TOUCH

## WHAT IS IT

The interactive bar from Vision2Watch transforms a bar or table into an interactive performance. An experience that the visitor gets will not be forgotten quickly and is therefore a unique way for you to advertise and entertain the customer at the same time.

## HOW IT WORKS

The multi-touch system reacts to any object that touches the table or bar surface. A projected logo or moving projection for example will appear as a reaction. Imagine that a customer is sitting at a table or the bar and an airplane is projected onto the surface. At the moment the customer puts their glass down, the airplane circles around the glass. It's also possible to let your customer write or draw on the bar. Or photos can be shared by sending them to the bar with Bluetooth from a mobile phone. There are many other possibilities with the interactive bar or table.

## THE POSSIBILITIES

The software will be custom-made for your company by Vision2Watch. The possibilities of design are therefore endless. The material can be projected upon an existing bar or a custom-made bar. In short, the interactive table or bar from Vision2Watch offers you a unique way of advertising, informing, entertaining or just a completely new way of standing out.

## IN BRIEF

- Attracts attention and entertains
- Simple and quick to install at almost any location
- Stable software and beamers
- Low maintenance
- Flexible in size
- We'll provide standard- or custom-made software
- Not only for sale, but also for rent
