

## WHAT IS IT

The Interactive wall from Vision2Watch is designed to bring out your message in an striking new way. The iWall is a projection on a wall, which transforms a normal wall into an interactive media field. This media field will react to anything that walks by, this way it will instantly attract any passersby.

## HOW IT WORKS

Because the Yourwall from Vision2Watch does not need any touch to react, the passersby won't be able to miss it. You will get an instant reaction and your advertisement will not be forgotten. The content will be created by Vision2Watch after your ideas.

## THE POSSIBILITIES

With the interactive wall you could for example simulate the following: Imagine you are passing a normal looking wall. At the moment you walk by, the wall starts to crumble and shows a beautiful green field with your company logo and slogan projected in the area. The interactive wall can be installed at almost any location, for example at an entrance, in a shopping mall, on your office building or outside your shop.

## IN BRIEF

- Attracts and entertains potential clients 24/7
- A unique way to get your message across
- Easy and quick to install at almost any location
- Durable
- Flexible in content and size
- Can be permanent or removable
- Both for sale and for rent
- Stable software, projection screens and beamers
